

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR A SUPPLIER INTERFACE IN A SUPPLY CHAIN MANAGEMENT FRAMEWORK

5

ABSTRACT

A system, method and computer program product are disclosed for providing a supplier interface. Utilizing a network, data is received from a plurality of stores of a supply chain. This data relates to an amount of goods sold by the stores. The data is aggregated in a database. Subsequently, a request is received from a supplier which includes a plurality of supplier parameters. Information from the database relevant to the supplier parameters is extracted in response to the request and the information from the database is transmitted to the supplier utilizing the network. Also, a supply of raw materials from which the goods are produced is adjusted based on the information.
